Company Profile

DENVELO SURGICAL INTERNATIONAL has been manufacturing and supplying the Dental instruments, Dental Implant instruments, Surgical and other Medical instruments all over the world since 1996.

ADDITIONALLY

For more than 25 years, **DENVELO SURGICAL INTERNATIONAL** customers have been benefitting from our outstanding industry knowledge and our ability to provide high-quality dental and surgical instruments. We bring years of industry experience to each customer and constantly strives to meet our goal of 100% customer satisfaction. We believe in perfection, so all the instruments which we manufacture are sent to different well-reputed Surgeons worldwide. These surgeons test instruments in their clinics and their suggestions are seriously considered to make certain improvements in instruments.

DENVELO SURGICAL INTERNATIONAL always provide our customers with a quote on instruments as per their required specifications. We not only dispatch customer's order within the agreed time but also facilitate our regular customers to meet their urgent orders by maintaining stock for selective regular instruments in our warehouses and factory. Sample orders are accepted from Potential customers, so they can evaluate the quality of our instruments before they place bulk orders. Being a manufacturer, our prices are very competitive & affordable for all type of customers. Regarding Packaging & marking of instruments, we offer branded services to all customers and provide their brand mark or their company logo on products.

Circumcision Clamps

Assisted by two haemostats or ligatures the foreskin is pushed over the bellshaped protection - rod and the glans is placed into it.
 By now, the wing - nut is tightened as close as possible, so the foreskin in annular compressed. The foreskin is cut of with a scalpel, right next to the compression ring. The circumcision clamp remains a few minutes to avoid bleeding. In case that any large vein, specially the frenular artery, is cut through, a ligature must be set.
 The advantage of the method described is the cosmeticly favourable scar which is left after rejection of the small necrotized portion.

Plaster Shears

Special features:

The construction of the open jaws avoids tiresome clogging by plaster remnants and allows furthermore an easy cleaning.

The shears do not glide off the plaster owing to the deep teething on the jaws.

The knives with hollow grinding have a better cutting ability and therefore less force is required.

The knives are guided by ball bearings.
